POOL PROBLEM SOLVER

As a general rule, do not add anything to your pool without testing the water first to determine what is needed. You can't know what your pool needs if you don't test!

- 1 Test the water daily (or as often as needed)
 - ▶ Chlorine
 - ▶ pH
 - ▶ Alkalinity
 - ▶ Calcium (every 2 weeks to monthly)
 - ▶ Cyanuric Acid (weekly)

- 2 Add sanitizer and other chemicals (as needed):
 - **If using Cal-Hypo**, dissolve it with a small amount of pool water in a bucket. **Always add chemicals to water, never water to chemicals!** Then pour the solution into the pool water evenly around the edges of the pool **OR** manually distribute (broadcast spread) granular Cal-Hypo into the water around the edges of the pool water and brush it down to the drain.
 - **If using liquid chlorine**, pour it into the water evenly around the edges of the pool.

- 3 Wait for water to cycle and retest.

WATER CHEMISTRY GUIDELINES

PARAMETER	IDEAL
Sanitizer / Free Chlorine	2.0 - 4.0 ppm
pH	7.4 - 7.6
Total Alkalinity	80 - 120 ppm
Calcium Hardness	200 - 400 ppm
Stabilizer / Cyanuric Acid	30 - 50 ppm

Adapted from PHTA B-1 Water Chemistry Guidelines

When caring for your pool, keep these precautions in mind:

- Always read product label directions and use only as directed.
- Never add chemicals to the water when people are in the pool.
- Never add chemicals through the skimmer system. Instead, add them by pouring in front of a return line or around the pool edges.
- Never mix chemicals prior to adding to the water.
- Always store chemicals in a cool and dry location out of direct sunlight.
